

Step Therapy

Most medical conditions can be treated with several different drug options. There are many drugs that cost much less than others despite working the same way and being just as effective. The Step Therapy program helps you get the treatment you need at the most affordable price.

Here's how it works:

Get a prescription → Try a **Step 1** drug ↖ Move on to a **Step 2** drug if necessary

Step Therapy means trying less expensive options before moving on to more costly drugs. With this program, you would try a Step 1 drug before a Step 2 drug can be covered by your plan. A Step 2 drug will be covered if the Step 1 drug does not treat the condition it was prescribed for or if it causes side effects that stop treatment.

If your prescription is for a Step 2 drug, our pharmacy system will automatically check for Step Therapy requirements. If your pharmacy history shows you have already tried a Step 1 drug in the recent past, the prescription for the Step 2 drug may be processed. If not, the pharmacist will contact your prescriber for further explanation.

There are some drugs that need an additional step before they can be covered. For a Step 3 drug to be covered, both a Step 1 and a Step 2 drug must be tried first.

Although not listed here, many brand-name drugs with generic equivalents also require Step Therapy. A generic equivalent is a medication that contains the same active ingredients (what makes the medication work) as the brand-name drug, but often costs less.

We encourage you to discuss your treatment and medication options with your doctor. If you have questions about the Step Therapy program, call customer service at **800-759-3203**.
